Webinar:

The History of Oak Wilt Research in Texas

Join us this Friday at 1PM for a one-hour webinar

Did you ever wonder when oak wilt was discovered in Texas? Who first described the symptoms? Where did the Oak Wilt Suppression Project come from? How we know how fast it moves and where we got our sampling, testing, trenching and injection protocols?

Millions of Texas oaks have died in the battle with oak wilt and the history of our current understanding of this epidemic is a true scientific detective story. This webinar will show you how science has been used to reveal the secrets of oak wilt and how the work of dedicated scientists and practitioners has led to our latest understanding of oak wilt disease identification and management techniques.

Your Instructor:

Gene Gehring will present *The History of Oak Wilt Research in Texas* in this one-hour webinar presented by the Texas Chapter of the International Society of Arboriculture. Gene is an ISA Board Certified Master Arborist who has a B.S. in Urban Forestry, a M.S. Forest Pathology from Texas A&M and over 30 years of on the job experience with oak wilt in Texas. From oak wilt graduate student to coordinator of the Texas A&M Forest Service Oak Wilt Suppression Project to private consulting arborist, he has looked at, managed, and treated oak wilt almost everywhere it has been found in Texas.

1 ISA CEU awarded at the end of the webinar
